## **J2xPLM Platform V 1.0 Powered by SAP NetWeaver™ certified**

### **xPLM Solution provides a CAD Integration Platform Powered by SAP NetWeaver™ certified**

xPLM now supports SAP Powered by SAP NetWeaver™ certified NetWeaver integration, taking advantage of the latest service-oriented technologies and business platform offered by SAP. xPLM Solution delivers application and enterprise system integrations which provide the linking of critical work processes, tasks and data to effectively deploy and realize envisioned CAD and PLM benefits.

#### **J2xPLM Integration Platform**

The J2xPLM Integration Platform leverages SAP NetWeaver™ technology with xPLM Solutions' expertise in CAD, PLM, and ERP integrations to provide SAP customers robust, flexible, configurable and service-oriented CAX integrations. Initial CAD integrations available on the J2xPLM Integration Platform will include CATIA, Pro/ENGINEER, UG/NX, and SolidWorks. Integrations can be deployed in a direct mode using SAP GUI or an indirect mode using the SAP NetWeaver Application Server. Both modes provide full access to all SAP PLM objects via BAPI™ technology and allow deep integrations with the major objects, structures, and functions of the CAX application. The J2xPLM Integration Platform supports expanded flexibility to deploy customer-specific changes to the user interface and functionality. Benefits include:

- State of the Art Technology
- Supports SAP NetWeaver™ and ABAP™ Connectivity
- Single Platform for All CAD Integrations
- Low Total Cost of Ownership
- Customizable Integration
- High Performance

#### **About xPLM Solution**

xPLM Solution with headquarters in Dresden, Germany, specializes in providing integration solutions and deployment services to the PLM industry. For more than 20 years, the xPLM team has been at the forefront of developing and deploying optimal integrations of leading CAD, PLM and ERP systems. The management team and engineering staff of xPLM Solution brings with them more than 250 years of accumulated professional experience in the PLM market. The specialized knowledge and experience defining and configuring PLM based processes of complex engineering environments define xPLM Solution's core competency.

All integration solutions are built upon a common integration platform with system-specific connectors. The J2xPLM integration platform consists of components and basic services, which are required for system integration. In addition, required processes are provided to support specific integration interaction and data exchange between the targeted systems. A configuration tool allows for the customization of processes and data models. J2xPLM connectors provide the system specific adapters to access the respective applications based on standard application interfaces and integration technologies of the system providers.

For more information about our J2xPLM Integration Platform download our [J2xPLM Brochure](#) or contact Karl „Charly“ Wachtel or visit [www.xplm.com](http://www.xplm.com).
